

DO IT YOURSELF - CELLAR DESIGN KIT

Rosehill's Modular Racking

This useful tool is great for the hands on person who wants to design their own cellar. It's fun and easy to experiment with a cellar design using Rosehill's helpful cellar planning template. The pages for the cellar design grid and racking templates follow these instructions. You are ready to begin!

Be creative! Experiment with different racking layouts to achieve your dream cellar. If you like, when you are finished, you could fax us your layout and we could provide our suggestions.

Getting Started:

- Measure each wall of your room, including the sizes and locations of any doors, openings or irregularities and record the dimensions. Don't forget the ceiling height!
- Note the location of windows, doors and other built-in elements on the grid.
- Keep cellar traffic patterns in mind.
- One square on the grid represents one square foot of room space.

Thinking About Your Design

- Use one graph square for every foot of actual space.
- Cut out the racking pieces that represent the racking modules you desire. (The racking pieces are to scale to fit the grid.)
- Racking modules are generally 16" or 32" wide with the Bordeaux wood case rack measuring 24" wide. The corners are 19.5".
- At first pass, you need to concentrate on more of what will fit in the space available, worry about the height and top level of racking later.
- The height of the racks are 32" or 48" and can be mixed and matched.

Laying Out Your Design

- Place the cutouts on the design grid and create your own wine cellar!
- Start by placing the corners in first, then fill in the rest of the space of what is available per wall.
- Keep in mind that some of the racks can be cut to fit the space.
- Individual racks need to be cut in 4" increments.
